

## How to add Modifiers to Products:

- First of all create modifiers whatever we want. That is add modifier item to particular department → fill all the details → go to optional info tab → select Modifier item → save → save.

- After creating modifiers go to view and edit product tab select product item click on edit , select modifiers tab after that select the modifiers whatever we want and click on save button.

After adding modifiers to the product, if we want to see the product with modifiers go to POS tab and select the product of that Department, click on item it will display modifiers whatever you add to that particular product (screen below)

Select that modifiers and then click on OK button it will display item with modifier on the POS Screen like this...
